IGNITE

A Breast Reconstruction Awareness Program- June 8th , 2024

"IGNITE", A Breast Reconstruction Awareness Program, held on June 08, 2024, organized by the RGCIRC in association with Project I am Enough, successfully brought together survivors, healthcare professionals, and community members in a supportive and informative environment.

The idea of the event was to educate and empower breast cancer survivors about their reconstruction options and available resources.

Dr. A.K Dewan (Director, Surgical Oncology) talked about the significant advancements and evolution of breast cancer care in India and how the focus has shifted on to tailored treatments for individual patients. Dr. Rajan Arora (Senior Consultant, Microvascular and reconstructive surgery) and Dr. Samarth Gupta (Attending Consultant) further shed light on demystifying breast cancer reconstruction and navigating the journey of reconstruction onto normalcy in life.

The organizers of the event Dr. Nikita Gupta (Visiting Consultant, Dermatology), Dr Samarth Gupta and Ms. Siya Tayal successfully achieved their goal of educating not only the cancer survivors but the community at large through panel discussions and interactive sessions, ensuring they have the correct information needed to make informed decisions about healthcare. By normalizing these conversations, it is easier to break down the stigma and misconceptions surrounding the topic, fostering a supportive and safer setting and taking a step towards more compassionate and informed post- breast cancer care.

AMPI -NC CON 2024

April 13th -14th, 2024

29th annual conference AMPI-NC CON 2024 emphasized the role of Medical Physicists in revolutionizing cancer diagnosis and treatment. Over 200 oncology experts spotlight crucial technological advances to address India's escalating cancer crisis.

Rajiv Gandhi Cancer Institute and Research Centre (RGCIRC) successfully concluded the 29th Annual Conference of the Association of Medical Physicists of India (Northern Chapter). Themed "Technological Advancements: Connecting Roots to Future in Cancer Cure," the event was a critical platform for addressing the escalating cancer cases in India through the lens of advanced medical physics.

The conference spotlighted the crucial role of medical physicists in revolutionizing cancer care through cutting-edge technologies and innovative research. With cancer cases on the rise in India, the applica-

of new technologies, precision, and effective procedures was emphasized as essential for enhancing diagnostic accuracies and treatment efficacies. Renowned speakers from leading institutions globally, including AIIMS and IIT Delhi, shared insights into the latest advancements and the dynamic future of oncological practices.

Breast Cancer Update Conference 2024

June 15th and 16th, 2024

Rajiv Gandhi Cancer Institute and Research Centre (RGCIRC) successfully hosted the “Breast Cancer Update Conference 2024” held on June 15th and 16th. The conference brought together leading experts, researchers, healthcare professionals and faculty from India and abroad to explore the most recent breakthroughs in breast cancer research. The two-day event highlighted critical findings from the American Society of Clinical Oncology (ASCO), European Society for Medical Oncology (ESMO), and San Antonio Breast Cancer Symposium (SABCS).

The conference held under the patronship of the chairman Mr Rakesh Chopra featured expert-led sessions on emerging therapies, precision medicine, and patient-centered care, along with panel discussions and interactive workshops designed to foster knowledge exchange and collaboration. Topics included early-stage breast cancer, metastatic breast cancer, triple-negative breast cancer, and advanced treatment options such as immunotherapy and precision medicine.

Pioneering Advanced Technology

RGCIRC Leads the Way in Revolutionary Cancer Treatment

Rajiv Gandhi Cancer Institute and Research Centre (RGCIRC) has made history by performing India's first-ever telesurgery in cancer care. This groundbreaking procedure, which represents a monumental leap in medical technology, ensures precision and safety while overcoming geographical barriers.

Led by Dr. Sudhir Rawal, Medical Director of RGCIRC and Chief of Genital Urinary Oncology, the expert team, including Dr. Amitabh Singh and Dr. Ashish, successfully performed a Radical Cysto-Prostatectomy with Bilateral Lymph Nodes Removal. The surgery, which traditionally took up to three hours in open surgery, was flawlessly completed in just one hour and forty-five minutes, showcasing the efficiency, reliability and safety of telesurgery. Dr. Sudhir Srivastava, CEO of SSI, and his team managed all the technical aspects. They successfully provided clear visibility of the operative field and precise movement of the surgical instruments. The experience was akin to performing the surgery in an actual operating theatre. The patient, aged 54, was located at RGCIRC, Rohini Centre, Delhi, and was diagnosed with bladder cancer.

CRYOABLATION

“Freeze your cancer not your life”

Cryoablation is another thermal ablation technique that has been in use since the mid-19th century to treat various tumors of the breast, cervix, and skin via induction of cold temperatures. The modern era of Interventional Oncology uses cryoprobes to achieve optimally low temperatures for tumor cell death through the Joule-Thompson effect. This effect is a property of adiabatic (ie, no heat transfer into or out of a system) real gases that move from a high- to a low-pressure system, causing gas expansion and consequent decrease in gas temperature. The cryoprobe functions as a high-pressure, closed-loop system primarily covered with a thermal insulation shell that establishes adiabatic conditions.

The distal tip of the cryoprobe is free of thermal insulation, allowing for the transfer of cool or hot temperatures to its metallic walls. By placing one or multiple probes in a particular malignant tumor using image guidance, an ice ball forms around the distal end of the cryoprobe, which kills the tumor via a freezing-thawing mechanism. Argon gas is used in the freezing phase because it is a high-pressure gas in room air,

while high-pressure helium gas is used in the thawing phase due to its unique property of temperature increase with gas expansion. Rapid cooling causes intracellular ice crystal formation, and thawing causes melting of extracellular ice crystals, creating a hypotonic environment and cellular swelling. The damaged mitochondria induce apoptosis (seen in the periphery of the ablation zone), while cold-induced tissue ischemia results in coagulative necrosis within the ablation zone after several weeks.

Cryoablation boasts certain advantages over other thermal ablation modalities. One of the main differences is that the ablation zone can be visualized in real-time using ultrasound, CT, and/or MRI. In addition, cryoablation is less painful due to the anesthetic effect of cooling tissues. Procedure can be performed on outpatient basis under local anesthesia or light sedation. Patients can be discharged on the same day of procedure. Also, there is a strong immune response seen that consists of antibody production against tumor-specific antigens that reside in tissues postablation. However, disadvantages include systemic inflammatory response syndrome (cryoshock), bleeding complications due to lack of cautery effects, and the large expense associated with purchase and storage of argon and helium gas.

With regular improvements made to cryoablation equipment and supplemental immunotherapy, the future horizon of treatment indications looks promising. Beyond the treatment of renal cell carcinoma (RCC) and hepatocellular carcinoma (HCC), cryoablation has also been effective in treating fibroadenomas for more than a decade as well as unifocal ductal cancer, with a 92% success rate. Stage I prostate cancer has been effectively treated, especially with recurrence after radiation therapy. Stage IA non-small-cell lung cancer may also be treated and has been associated with lower pain levels. Another important role is treating bone metastases. Most recently, the multicenter MOTION study published findings on the role of cryoablation for palliative pain treatment in patients with painful bone metastases. As ablation technology continues to make advancements, cryoablation will continue to broaden its role in Interventional Oncology.

CMEs

CME - IMA AGRA, 04th April 2024

RGCIRC organized CME programme on oncology in association with IMA Agra on Thursday, 04th April 2024 at Hotel Holiday Inn, Agra, UP. Dr. Narendra Agrawal, Unit Head & Sr. Consultant, Hemato-Oncology, Leukemia and BMT, RGCIRC delivered a lecture on **Advances in Multiple Myeloma** and Dr. Kundan Singh Chufal, Sr. Consultant & Unit Head, Radiation Oncology, RGCIRC spoke on **Recent Advances in Radiation Oncology: from Cure to Quality Life.**

CME – IMA KARNAL, HARYANA, 27th April 2024

RGCIRC organized a CME program in association with Indian Medical Association (IMA), Karnal on Saturday, 27th April 2024 at Noormahal Palace, Karnal, Haryana. Dr. Rajeev Kumar, Sr. Consultant & Chief of Breast Surgical Oncology delivered a lecture on **Early Diagnosis & Management of Breast Cancer** and Dr. Narendra Agrawal, Unit Head & Sr. Consultant, Hemato-Oncology, Leukemia and BMT spoke on **Advances in Multiple Myeloma.**

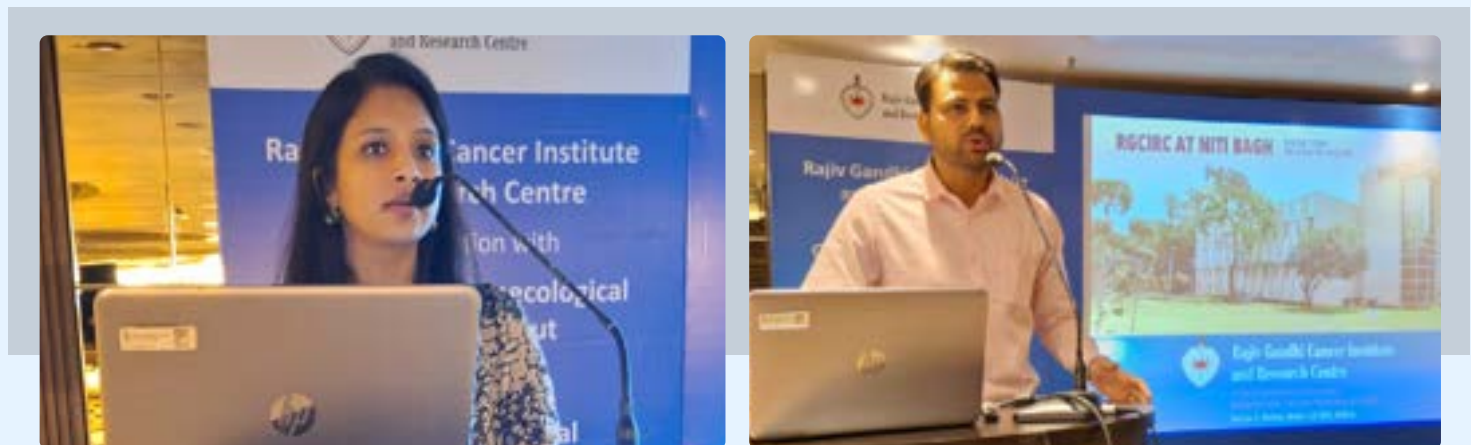

CME- IMA OUTER WEST BRANCH, DELHI 04th May 2024

RGCIRC organized a CME in association with IMA Outer West Branch on Saturday, 04th May 2024 at Hotel Radisson Blu, Paschim Vihar, New Delhi. Dr. Vipul Sheth, Sr. Consultant & Unit Head, Hemato Oncology & BMTU delivered a lecture on Car T Cell in Hematology Malignancies and Dr. Vandana Jain, Sr. Consultant & Chief of Gynae Surgical Oncology spoke on Awareness of Ovarian & Uterine Cancers. The CME was very well appreciated by the gathering.

CME - MEERUT OBSTETRICS & GYNAECOLOGICAL SOCIETY, 11th May 2024

RGCIRC organized a CME in association with Meerut Obstetrics & Gynaecological Society on Saturday, 11th May 2024 at Hotel Harmony Inn, Grah Road, Meerut, UP. Dr. Vandana Jain, Sr. Consultant & Chief of Gynae Surgical Oncology delivered a lecture on **Recent Updates in Endometrial Cancer** and Dr. Kapil Goyal, Consultant – Medical Oncology, RGCIRC, Niti Bagh spoke on **Recent Advancements in Ca Breast**.

CME - PRIVATE DOCTORS ASSOCIATION, ALIGARH, UP, 18th May 2024

RGCIRC organized a CME in association with Private Doctors Association, Aligarh, UP on Saturday, 18th May 2024 at Lemon Tree Hotel, Aligarh, UP.

Dr. Shubham Jain Sr. Consultant – Surgical Oncology, RGCIRC, Niti Bagh delivered a lecture on **Evolution in Surgical Care of Cancer Patients**, Dr. Kapil Goyal, Consultant – Medical Oncology, RGCIRC, Niti Bagh spoke on **Recent Advancements in Ca Breast** and Dr. Sunny Malik, Consultant In charge, Pain Management, Hospice Care & Palliative Medicine, RGCIRC, Niti Bagh spoke on **The Role of Erector Spinae Plane Block (ESPB) in Cancer Pain Management**.

The CME program empowered healthcare professionals with the latest knowledge in cancer treatment.
